

# iPRO Solutions White Belt

## iPRO Solutions

iPRO offers contract manufacturing solutions that cover the entire manufacturing process, addressing customers' needs from design, component sourcing, product assembly, testing and deliver to end user.

## Sites

The Main manufacturing centre is located near Aylesbury, Buckinghamshire, with warehousing, logistics, purchasing and other facilities in India, China and Malaysia

## White Belt Problem Solving

iPro Solutions requested an awareness training package in Lean and Six Sigma Problem Solving tools. We tailored our standard White Belt programme and deployed this across the entire permanent and long-term-contract staff group.

We delivered 4 sessions of 2 hours duration, on the primary site near Aylesbury, and overseas staff were trained via Skype facilities.

The training sessions combined theory and practical application, with delegates being tasked to go into their working environment to capture examples relating to the topics covered.

## Outcomes

Over a 4-month period, 62 staff members, received training, with 51 completing all 4 modules and receiving their White Belt Certification. This included 10 overseas delegates.

In order to receive their certificate, all delegates were required to complete a small improvement project in their working area. Completed projects included: setting-up and leading a basic 5S activity, introducing a control plan for an existing stock control process, and utilising clearer visual management tools in a working area.

As a result, small improvements have been made right across the business in every area...

“ I have really enjoyed the course, with tools I can use in my work everyday. It was good to map out the simple processes to see what other people thought was happening.

Dominic Forchione  
Production Cell Worker

“ I have seen Six Sigma deployed in much larger companies without success; this programme has addressed the understanding at grass roots level and has already had a positive effect on us.

Tony Wall  
Former CEO of iPRO
