

JJS Manufacturing Lean Practitioner Programme

Company Information

JJS helps manufacturers of low to medium volume but high-complexity electronic products focus on their core activities that deliver maximum value to them. They provide part or complete outsourced manufacturing services, allowing clients to spend their time developing and selling new and better products.

Requirements

- Build capability within the group in terms of Problem Solving and Process Improvement, certifying core team in Lean Practitioner skills.
- Establish a common language for Continuous Improvement within the JJS/Paragon Group.
- Believer bottom-line benefits and process improvements through the completion of projects.

Capella's Input

5 days of on site training and project coaching support

Training in tools and techniques supported by simulation training

Improvement project selection tools and guidance

On-line support outside training environment

Project progress reviews in line with recognised certification criteria

“ All candidates felt they had taken significant learning from the course, enjoyed the interactive practical elements and will take the learning forward into every day activity ”

Results

All delegates selected and project-managed improvement opportunities directly providing benefit back to the business.

Project benefits ranged from robust recommendations for new technology, reduction of internal scrap, internal and external logistic processes improved for better handling and location identification plus efficiency improvements on a number of key processes.

All delegates reached the accepted criteria to certify as Lean Practitioners.

“ I've enjoyed the course very much and the enthusiastic manner in which yourself and your team presented the course ”
